3. (Amended) A product according to claim 2, wherein the skin is set back from the edges of the overmolded plastic material.

4. (Amended) A product according to claim 3, wherein the skin has a thickness is at most 500  $\mu\text{m}$  and further comprises one or more films of thermoformable plastic material and at least one functional layer.

5. (Amended) A product according to claim 4, wherein the thermoformable plastic material is selected from the group consisting of polycarbonate, polypropylene, poly(methyl methacrylate), ethylene/vinyl acetate copolymer, poly(ethylene terephthalate), polyurethane, polyvinylbutyral, and cycloolefin copolymer.

6. (Twice Amended) A product according to claim 3, wherein the skin further comprises a hydrophobic/oleophobic agent which is incorporated into the scratch-resistant layer, grafted onto the scratch-resistant layer, or deposited on a plastic support film which is applied directly to the scratch-resistant layer.

7. (Twice Amended) A product according to claim 3, wherein the skin further comprises, over all or part of its surface, a decorative and/or masking layer.

8. (Twice Amended) A product according to claim 3, wherein the skin further comprises one or more optically selective layers.

9. (Twice Amended) A product according to claim 3, wherein the skin further comprises a stack of antireflective layers.

10. (Twice Amended) A product according to claim 3, wherein the skin further comprises an electrically conductive network.

11. (Twice Amended) A product according to claim 3, wherein the core comprises a thermoplastic material selected from the group consisting of polycarbonate, poly(methyl methacrylate), ethylene/vinyl acetate copolymer, poly(ethylene terephthalate), polyurethane, cycloolefin copolymer, and an ionomeric resin; a thermosetting or thermally cross-linking

polyurethane, unsaturated polyester, or ethylene/vinyl acetate copolymer; or a plurality of layers of one or more of the thermoplastic or thermosetting or thermally cross-linking materials.

12. (Twice Amended) A product according to claim 2, wherein the overmolded plastic material comprises one or more elastomeric substance.

13. (Twice Amended) A process for preparing the product of claim 1, comprising: holding one or two skins, optionally thermoformed, at the bottom of a single mold, then injecting a first and then at least a second plastic material into the single mold.

15. (Twice Amended) A process for preparing the product of claim 1, comprising injecting a first plastic material into a first mold and then transferring the resulting injection molded first plastic material into a second mold, and then injecting a second plastic material into the second mold.

B2  
16. (Twice Amended) A process according to claim 13, wherein said holding is carried out by suction and/or blowing and/or electrostatic effect.

17. (Twice Amended) A process according to claim 13, further comprising initially forming an electrically conductive network by metal screen printing.

18. (Twice Amended) A glazing for transportation vehicles or for buildings comprising the product of claim 1.

Please add new Claims 19-21 as follows:

B2  
19. (New) A product according to claim 7, wherein the decorative and/or masking layer is positioned directly under the support film of the scratch-resistant layer.

20. (New) A product according to claim 12, wherein the elastomeric substance is a thermoplastic.
